Proposal for the CIV-Meeting Agenda 2007

Sporting Code, General Section

7.3.1.7 Evidence from photographic sources or from data from navigation aids.
Evidence from photographic sources or from data recorded in flight from navigational aids may be used to verify flight evidence as specified in the Specialised Sections, including any requirements for sealing of equipments.

In SC Section 7 there is nothing specified, what requirements of any photographic documentation is needed, for the documentation of a world record.
We think there is a need to specify which photos are required (or an announcement that no photos are required).

Sporting Code, Section 7 D, Records and Badges

3.6.1 Remote take-off and/or landing point

A pilot may take-off from a point remote from the departure point and/or land at a point remote from the finish point of the flight provided that the departure and finish points are declared and the pilot is properly controlled over-flying these points. Any distance flown before the departure point or after the finish point is not counted towards the Course distance.

Perhaps it can be marked here that it is not possible to start the flight on a side of the triangle. It should be noted that the triangle course must have one start / finish point and two turning points which describe the course of the triangle as in 3.6.

Best regards

Herbert SIESS
