Aero Club d'Italia

Background

To stop a task is always the last option and with the current scoring rules sometimes it may happens that the decision is postponed till the very last moment to try to "save" the day.
This can lead to safety issues.
On the other hand to validate every task, even if very very short and with few points, can tempt the organizers to set task even in bad conditions.
We think that to reduce the minimum task validity to 1/3 of the nominal time can reduce both these issues

Proposal: to change S7F 12.3.2

Old version

$$minimumTime = min\left(1h, \frac{NominalTime}{2}\right)$$

New version

$$minimumTime = min\left(1h, \frac{NominalTime}{3}\right)$$
