

June 2008

Czech National CIMP Report

- Czech sport - pilots had 64 000 flying hours, 178 000 take offs in the year 2007.
- There were 158 incidents, 56 accidents (from these 7 fatal accidents).
- There was not reported any accident due to medical problems.

AMEs and AMC Prague assessed about 5 000 pilots from which were:

- 27,5% ultra-light pilots;
- 24,2% glider pilots;
- 13,2% skydivers;
- 10,5% private pilots;
- 10% para-gliders;
- 7,6% hang-gliders and
- 1% balloon pilots.

Only 34 applicants (0,68%) of all were unfit due to medical problems.

The main change should be in this year that the general practitioners should assess parachutists, hang-gliders and balloon pilots, from which we are not very happy because we think, their examination will be probably in the range like for driving licence.

Olda Truska, Prague
